CENTUM Group is an internationally positioned company with locations in Germany and Spain. CENTUM Germany is mainly active in the field of mission-critical and networked radio communication systems. With this clear focus, we offer our customers software and systems engineering services and solutions.

To strengthen our international systems engineering team in Munich, we are looking for a qualified and motivated

Test Engineer - Communications Systems (m/f/d)

Your role:

- Develop, and maintain test specifications, test cases, and test procedures based on system   requirements.
- Creation and implementation of test automation concepts
- Independent execution of tests for standard and customer-specific system solutions
- Planning and execution of system acceptance tests
- Creation/review of technical documentation such as test reports, bug reports, etc.

Your qualification:

- You have completed university studies in the field of electrical/ communication engineering or comparable
- You have prior experience with communication protocols as well as IP and network architectures
- Knowledge of standardized HF radio waveforms (STANAG 4285, 4538, 4539, ALE2G/3G etc.) and radio protocols (STANAG 5066 etc.) would be an advantage
- ISTQB certification or similar would be an advantage
- Excellent analytical and organizational skills
- Ability to work in a team and excellent communication skills
- Business fluent in German and English

We offer:

- Internal/external training and coaching opportunities.
- A highly motivated team in an international environment
- A high degree of flexibility in terms of working hours and location (part-time work possible)
- Attractive remuneration as well as extensive social benefits
